Professional Summary

Full-stack developer with 16+ years of experience, including 9 years at DataArt. I design and deliver web applications across the full development lifecycle—from architecture and databases to user interfaces, infrastructure, and production deployment. I have led cross-functional teams of up to 10 engineers as a Tech Lead, Team Lead, and Scrum Master.

My core expertise includes high-load and fault-tolerant systems, financial products, legacy modernization, CI/CD, and cloud infrastructure. I have worked on systems handling more than 2,000 requests per minute, applications with over 1,000 UI forms, and access-control models comprising 20+ roles and 1,000+ permissions.

Open to Tech Lead, Team Lead, and Senior Full-stack Developer positions, either as a full-time employee under Russian labor law or on a long-term contract through my sole proprietorship.

English: Intermediate (B1–B2)—comfortable reading technical documentation and participating in stakeholder calls.

Core Competencies

- Web application and database architecture
 - Engineering leadership and Scrum delivery
 - Performance optimization and fault tolerance
 - Third-party service and API integration
 - CI/CD, containerization, and cloud infrastructure
 - SPA development and responsive interfaces
 - Legacy system modernization and support
-

Technical Skills

Area	Technologies
Operating systems	GNU/Linux (Debian, Ubuntu)

Area	Technologies
Containerization	Docker, LXC
Cloud infrastructure	AWS, Yandex Cloud
Web servers	Nginx, Apache
Backend	PHP, Laravel, Yii, Symfony, WordPress, Drupal, Node.js, Python, Bash/sh
Frontend	JavaScript, Vue.js 2/3, WebRTC, React, Angular, Backbone.js, jQuery, Lodash, CSS, SCSS, Bootstrap, Quasar
Databases and caching	MySQL, PostgreSQL, MS SQL, ClickHouse, Redis, Memcached
Message brokers and queues	Kafka, RabbitMQ, Laravel Horizon
Development tools	Git, Composer, npm, pip, Jenkins, Webpack, Babel, Gulp, Grunt
Practices and methodologies	Scrum, CI/CD, SOLID, TDD, DRY, KISS
Project management	Jira, Trello, Redmine
Integrations	OAuth 2.0, LDAP, Active Directory, DocuSign, Office 365, Dropbox and other cloud storage services, payment systems
Additional	C, Arduino, Raspberry Pi, smart home technologies, AI

Professional Experience

Vsevolod Azovskiy, Sole Proprietor

2018–Present

Senior Full-stack Developer / Tech Lead / Team Lead / Scrum Master

Long-term software development and technical consulting for enterprise clients, startups, and product teams.

Softmaster LLC

2024–2026

Software Engineer

- Assessed software developed by the client
- Identified root causes of incidents and contributed to their resolution

DataArt Solutions, Inc.

2014–2023

Senior Engineer / Tech Lead / Team Lead / Scrum Master

Led cross-functional teams of 3–10 engineers and managed the full software delivery lifecycle, from architecture to production.

Key responsibilities and achievements:

- Designed and developed scalable web applications from the ground up
- Facilitated Scrum processes, including sprint planning, daily stand-ups, retrospectives, demos, and stakeholder reporting
- Maintained engineering quality through code reviews, performance analysis, and architectural reviews
- Improved application performance, resource utilization, and fault tolerance
- Modernized legacy PHP and JavaScript code while maintaining backward compatibility
- Designed relational databases and caching layers
- Implemented role-based access control for multi-user applications
- Integrated OAuth 2.0, Active Directory, LDAP, MS Exchange, Office 365, DocuSign, Google Drive, Yandex Disk, Box, and analytics services
- Built server-side applications on AWS and Yandex Cloud
- Developed a WebRTC video chat application
- Conducted security and performance testing using Kali Linux

Technology stack: PHP, Laravel, Yii, Symfony, WordPress, Drupal, Vue.js 2/3, Backbone.js, jQuery, WebRTC, Bootstrap, Quasar, SCSS, MySQL, PostgreSQL, MS SQL, Redis, Memcached, AWS, Yandex Cloud, Docker, Nginx, Apache, GNU/Linux, Git.

Galereya Chizhova Center, Voronezh

2012–2014

Web Developer, IT Department

Developed and supported web applications for the shopping center.

Softline, Voronezh

2010–2012

Systems Administrator / Help Desk Specialist

Administered servers and network infrastructure.

Log-For Taxi LLC, Moscow

2008–2010

Taxi Dispatch Management System Developer

Developed the web interface and integrated it with 1C.

Katok.Ru, Moscow

2006–2008

Senior Systems Administrator

Supported the ice rink's IT infrastructure.

Selected Projects

Osetrovsky Bridgehead

A self-initiated volunteer project: a web portal for a World War II museum.

Objective: Build an interactive QR-based navigation system for a museum site covering more than 10 km².

Solution and results:

- Developed responsive pages presenting information about battle sites, accessible through QR codes placed on location markers
- Implemented SEO optimization with server-side rendering
- Built a publishing system with CKEditor 5 and social media cross-posting
- Implemented two-level threaded comments

Technology stack: Docker, Yandex Cloud, Ubuntu Server, Nginx, Let's Encrypt, Node.js, Vue.js 2/3, Bootstrap 4, Laravel, Symfony, MySQL 8+, Redis.

WebRTC Video Chat

Role: Full-stack Developer—application build, DNS and HTTPS configuration, and STUN/TURN server setup.

Result: Delivered a working video chat application using a third-party UI with the author's permission.

Technology stack: Docker, Node.js, Vue.js 3, WebSocket.

CRM System for a Financial Services Practice (NDA)

Role: Scrum Master for a team of 3–10 engineers and database architect.

Results:

- Designed the database architecture using MySQL and MS SQL
- Delivered more than 1,000 UI forms with Backbone.js and Bootstrap
- Implemented RBAC with 20+ roles and 1,000+ permissions
- Integrated LDAP, payment acquiring, Dropbox, Box API, DocuSign, and Google Maps
- Implemented OAuth 2.0 and DocuSign for online contract signing
- Automated financial transactions and business-event logging

Technology stack: Docker, Nginx, MS SQL, MySQL 5+/8+, PHP 7+/8+, JavaScript, Backbone.js, Lodash, jQuery.

Social Platform for People Aged 60+ (NDA, Outside the CIS)

Role: DevOps Engineer / Systems Administrator.

Results:

- Ensured fault tolerance under loads exceeding 2,000 requests per minute
- Automated infrastructure updates

Technology stack: AWS, Ubuntu Server 18, Nginx, Let's Encrypt, MySQL, WordPress, Memcached, Load Balancer.

Education

Specialist Degree in Biology and Bioengineering

Russian State Agrarian University—Moscow Timiryazev Agricultural Academy, 2009

Projects marked as NDA contain confidential information. Further details about publicly available projects can be provided upon request.
