About Me

Full-stack developer with 16+ years of experience, 9 of which were at DataArt. Lead cross-functional teams of up to 10 people as a Scrum Master / Tech Lead.

I design fault-tolerant architectures for high-load systems (2,000+ requests/min, financial reporting with 1,000+ forms). **Implement CI/CD**, configure cloud infrastructure (AWS, Yandex Cloud), optimize database and application performance.

I work with both modern stacks (Vue 3, React, Laravel, Symfony, Node.js) and legacy code. Integrate OAuth 2.0, LDAP, DocuSign, payment systems, and WebRTC.

Looking for: full-time employment under the Russian Labor Code or long-term projects via sole proprietorship (IE). Open to Tech Lead / Team Lead / Senior Full-stack Developer roles.

English: Intermediate (B1–B2) — read technical documentation, participate in calls with stakeholders.

Key competencies:

- Application and database architecture design
 - Performance and fault tolerance optimization
 - Integration with external services and APIs
 - CI/CD and DevOps practices
 - SPA development, responsive layout
 - Attention to detail, fast learning, team communication
-

Skills

Category	Technologies
Programming languages	PHP, JavaScript, Python, SQL, NoSQL, C
Frontend frameworks	Vue.js (2/3), jQuery, Backbone, Underscore/Lodash, Bootstrap, Quasar

Category	Technologies
Backend frameworks	Laravel, Yii, Symfony
CMS	WordPress, Drupal
Frontend technologies	WebRTC
Databases	MySQL, PostgreSQL, MS SQL, ClickHouse, Redis, Memcache
DevOps & infrastructure	Docker, AWS, Yandex Cloud, Nginx, Apache, Ubuntu, Fedora, Arch (Manjaro)
Development tools	Git, Jenkins, Webpack, Babel, Gulp, Grunt
Methodologies	Scrum, CI/CD
Issue tracking systems	Jira, Trello, Redmine
IoT	Arduino, Raspberry Pi

Work Experience

2023 — present

Sole Proprietor Vsevolod Azovsky

Role: Senior Full-stack Web Developer, Tech Lead, Team Lead, Scrum Master

Collaboration formats: Employment under Russian Labor Code / Sole proprietorship (IE) for working with corporate clients, startups, and products requiring expert technical expertise.

Why work with me:

- Design application and database architecture from scratch for high loads
- Optimize performance and fault tolerance of existing solutions
- Implement CI/CD and DevOps practices, configure cloud infrastructure (AWS, Yandex Cloud)
- Develop SPAs, responsive interfaces, and WebRTC video chats
- Integrate with OAuth 2.0, LDAP, Active Directory, DocuSign, cloud storage
- Manage teams as a Scrum Master: planning, quality control, code review, client communication
- Work with both modern stacks (Vue, React, Laravel, Symfony, Node.js) and legacy projects

Open to:

- Full-time employment (Russian Labor Code)
- Long-term outsourcing/outstaffing projects via IE
- Tech Lead / Team Lead / Senior Full-stack Developer roles

2014–2023

DataArt Solutions, Inc.

Senior Engineer, Tech Lead, Team Lead, Scrum Master

Managing cross-functional teams of 3–10 engineers, full development cycle from architecture to production.

Key responsibilities:

- Design and development of scalable web applications from scratch: server logic, databases, client interfaces
- Scrum processes: daily stand-ups, sprint planning, retrospectives, demos, stakeholder reporting
- Code quality control through reviews, performance analysis, architectural reviews
- Performance optimization, resource consumption, fault tolerance
- Legacy code modernization (PHP, JavaScript) while maintaining backward compatibility
- Integration with external APIs: OAuth 2.0 (Google, Microsoft, Box, DocuSign), Active Directory / LDAP, MS Exchange (NTLM, SOAP), Office365, cloud storage (Google Drive, Yandex Disk, Box), analytics services

Technology stack:

- **Backend:** PHP (Laravel, Yii, Symfony), WordPress, Drupal
- **Frontend:** Vue.js 2/3, Backbone, jQuery, WebRTC, Bootstrap, Quasar, SCSS
- **Databases:** MySQL, PostgreSQL, MS SQL, Redis, Memcache
- **DevOps & infrastructure:** AWS, Yandex Cloud, Docker, Nginx, Apache, Linux (Ubuntu, Fedora, Arch)
- **Tools:** Git, Webpack, Grunt, Gulp, Babel, Jira, Trello

Achievements (examples):

- Built server applications from scratch on AWS and Yandex Cloud
- Designed and optimized relational databases and caching layers
- Implemented RBAC for multi-user applications
- Developed WebRTC video chat
- Conducted security and performance testing (Kali Linux)

2012–2014

Gallery Chizhova Center, Voronezh

Web Programmer, IT Department

Development and support of shopping center web applications.

2010–2012

Softline, Voronezh

System Administrator

Administration of servers and network infrastructure.

2008–2010

Log-F Taxi LLC, Moscow

Developer of taxi dispatch management system (Web + 1C)

Creation of web interface and integration with 1C.

2006–2008

Katok.Ru, Moscow

Senior System Administrator

Maintenance of IT infrastructure for an ice rink complex.

Selected Projects

1. Financial Practice CRM System (NDA)

Technologies: Docker, Nginx, MS SQL, MySQL 5.7–8+, PHP 7.4–8+, JavaScript (Backbone, Lodash, jQuery)

Role: Scrum Master (team of 3–10 people), Database Architect

Results:

- Designed database architecture (MySQL, MS SQL)
- Created over 1,000 interface forms (Backbone.js, Bootstrap)
- Implemented RBAC with 20 roles and 1,000+ permissions
- Integration with LDAP, banks (acquiring), cloud storage (Dropbox, Box API, DocuSign), Google Maps
- Implemented OAuth 2.0 and DocuSign for online contract signing
- Automated financial transactions and business event logging

2. Social Project for People Over 60 (NDA, non-CIS)

Technologies: AWS, Ubuntu Server 18, Nginx + Let's Encrypt, MySQL, WordPress, Memcached, Load Balancer

Role: DevOps Engineer, System Administrator

Results:

- Ensured fault tolerance under load > 2,000 requests/min
- Automated infrastructure updates

3. saysim.ru — mini social network and blogosphere (author's project)

Technologies: Yandex Cloud, Ubuntu, Nginx + Let's Encrypt, Node.js, Vue.js 2/3, Bootstrap 4, Laravel, Symfony, MySQL 8+, Redis

Results:

- Full responsiveness (True Responsive Layout)
- SEO optimization with server-side rendering
- Posting system with WYSIWYG (CKEditor 5+), cross-posting to social networks
- Two-level comments
- Continuous integration (CI)

4. chat.saysim.ru — WebRTC video chat

Role: Setup, DNS configuration, HTTPS, STUN/TURN servers

Result: Working video chat (used third-party UI with author's permission)

5. ospl1942.ru — WWII Museum

Task: Interactive museum navigation via QR codes

Solution: Web pages with information about battle locations, accessible via QR codes on height markers

6. mironova45a.ru — HOA of an apartment building (Voronezh)

Task: Automation of HOA operations

Solution: Web system for tracking residents, payments, and service requests

Education

Specialist degree in Biology and Bioengineering

Timiryazev Russian State Agricultural University, 2009
